#### Notes:

Apparent Height: refers to the distance between the DNAPL surface and the bottom of the well sump which includes all fluids (groundwater and DNAPL) in the matrix. NA: Not Applicable

<sup>&</sup>lt;sup>1</sup>DNAPL not present, pumping not completed in this well

<sup>&</sup>lt;sup>2</sup>Pre-pumping gauge date

<sup>&</sup>lt;sup>3</sup>Post-pumping gauge date.

<sup>&</sup>lt;sup>4</sup>Total gallons of fluid (DNAPL and groundwater) removed from well based on measurement in container.

 $<sup>^{5}</sup>$ Represents the distance of the post-purging DNAPL material interface from the top of the MS/Fill interface.

<sup>&</sup>lt;sup>6</sup>Unless otherwise noted, this column refers to the total volume of DNAPL removed based calculation of volume based on well diameter and height of DNAPL in the well.

<sup>\*</sup>DNAPL is present but is under 6-inches and discontinuous.

<sup>\*\*</sup>Volume in the well is less than threshold required to perform DNAPL pumping procedures.

For historical reference to past DNAPL measurement events prior to January 2017, please refer to the January 2018 monthly report submitted to NYSDEC on 5 February 2018.

DMT = DNAPL Measurement Tool, consisting of a copper tubing handle, a spacer section to prevent the probe from contacting the sides of the well riser, and an all-thread rod probe to extend into the DNAPL.

<sup>3</sup> Volume of product recovered by downwell pump is estimated by approximating the volume discharged to the drum and additional product in tubing and on pump.

Volume of product recovered by bailer is estimated using the bailer volume and number of times bailed.

Volume of product recovered by double diaphragm and positive displacement piston pumps are estimated by approximating the volume discharged to the drum or by using the pre- and post-pumping apparent height of product and the well dimensions (8" diameter well).

<sup>4</sup> All depth and thickness values for HARW-3, HARW-4 HARW-5 and HARW-6 are provided as vertical equivalents of the field measurements based on the angle of the installed well.
